

Assessments Report - Scores Above 5

Background

This report analyzes the performance of users in assessments designed to gauge their understanding of mental health topics. Assessments are an essential tool in the platform’s educational efforts, aiming to inform users about recognizing mental health issues, understanding coping mechanisms, and knowing when to seek help. By evaluating user scores, we can identify knowledge gaps and enhance our educational resources to better address user needs.

Introduction

This report focuses on users who have achieved scores greater than 5 points in their assessments. The objective is to highlight high-performing users, analyze their strengths in understanding mental health concepts, and identify areas for improvement. By examining the distribution of scores, we can assess the effectiveness of our educational tools and ensure that they are aligned with our goal of increasing mental health literacy and ultimately reducing stigma surrounding mental health issues.

Assessment ID	User ID	Assessment Type	Score	Assessment Date	Created At
1	1	GAD-7	8	2024-09-15	2024-09-16 22:24:33
2	2	PHQ-9	12	2024-09-14	2024-09-16 22:24:33
4	4	PHQ-9	9	2024-09-15	2024-09-16 22:24:33
